

# HURON IRB EXCHANGE

AN INDUSTRY-LEADING, END-TO-END CLOUD SERVICE FOR CONNECTING ANY SINGLE INSTITUTIONAL REVIEW BOARD (IRB) OF RECORD AND PARTICIPATING SITES FOR MULTI-SITE RESEARCH STUDIES

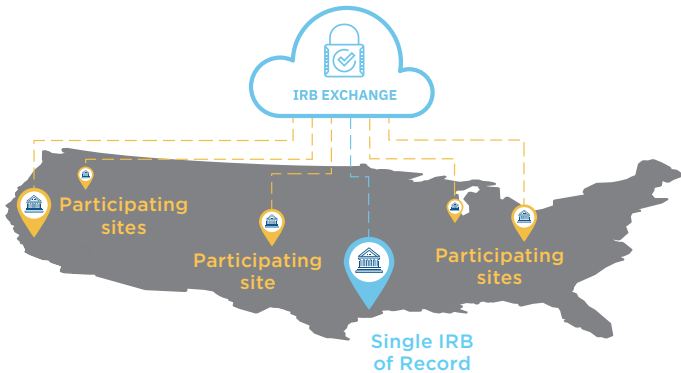

The fiercely competitive research environment challenges institutions to maintain a world-class research enterprise that moves society forward, promotes innovation and advances knowledge — all without adding additional administrative burden to researchers.

**Facilitate a seamless and secure exchange of IRB data** with your participating sites using Huron IRB Exchange. No matter what size your IRB is, or the platform it runs on, Huron IRB Exchange allows you to share information with your network of collaborative research partners electronically. This enables you to more easily maintain compliance with the Final NIH Policy on the use of a single IRB of record for multi-site research and the Department of Health and Human Services' (HHS) final revisions to the Common Rule.

With secure, multi-institutional access to essential data, Huron IRB Exchange eliminates data-entry errors that help you maintain regulatory compliance while increasing your team's productivity. Developed and powered by Huron, the leader in the IRB industry, the service can easily integrate with Huron IRB, or it can be leveraged as a stand-alone service. When the single IRB of record is on the IRB exchange, participating sites are included free of charge.

Huron IRB is part of the Huron Research Suite, a comprehensive suite of software solutions to facilitate communication, relieve administrative burden and free up time for what matters most — your research mission.

ORGANIZATIONAL BENEFITS	SOFTWARE FEATURES
Integrate your existing IRB system with Huron IRB Exchange	Direct integration with any electronic IRB platform, including out-of-the-box integration Huron IRB
Minimize the impact on your local IT resources	Completely cloud-based service with 99.95% availability and 24/7 monitoring
Exchange multi-site study data in a completely secure environment	Data is encrypted and authentication is required to limit data access to authorized individuals (or organizations)
